Batch 1, Pass 1

dev-0370 · intent

Answer: coverage_question
Reasoning: The customer asks whether the policy covers their brother driving, which is a question about how the policy works. No claim action or policy edit is requested.
Clarity: CLEAR
Text issues: none

dev-0161 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning: Own-damage claim under TPL. The policy is in force (accident 18/09/2026, end 24/02/2027) and no third-party rule applies. Own damage under TPL is denied (R1_TPL_NO_OWN_DAMAGE). The other party is insured, so R8_NO_OWN_COVER does not fire. No arithmetic is needed.
Clarity: CLEAR
Text issues: “accdient” is a typo and reads as deliberate noise. The phone number is a harmless distractor.

dev-0241 · faq

Answer: {"answer": 5}
Reasoning: §11 lists five required documents: accident report, registration, licence copy, damage photos and damage assessment.
Clarity: CLEAR
Text issues: “wallah” in otherwise plain English is unnatural. The Tabuk trip is a harmless distractor.

dev-0290 · extract

Answer: {"policy_number": "OMI-8534970", "accident_date": "2026-08-05", "report_number": "NJ-51216883", "damage_amount_sar": 10800, "fault_share": null}
Reasoning: The policy number, date and report number are stated directly. The assessed repair cost is SAR 10,800. No fault share is given, so it is null.
Clarity: CLEAR
Text issues: none

dev-0379 · intent

Answer: complaint
Reasoning: The customer is upset about how branch staff treated them and wants a complaint recorded.
Clarity: CLEAR
Text issues: "مظوفيكم" should be "موظفيكم" (transposed letters). It reads as a real typo, and it is unclear whether it is deliberate noise. The opener "أود أن أشرح ما حدث" suggests an incident but is not a giveaway.

dev-0098 · adjudicate

Answer: {"decision": "approve", "payout_sar": 17600}
Reasoning:

- **Rule path: COMP own damage. The policy is in force (end 10 Feb 2027). No exclusion applies. The report was filed on day 6, which is on time. All five documents are present, and 17,600 is above SAR 1,000.**
- **Total-loss check: 60% of 190,000 is 114,000, and 17,600 is below it, so there is no total loss. Base = 17,600.**
- **Deductible and payout: Hit-and-run means no deductible. Payout = 17,600 − 0 = 17,600, with no cap, so approve.**

Clarity: CLEAR on the facts. No fault share is stated, but it is irrelevant for a hit-and-run.
Text issues: "The other driver was polite about the whole thing" contradicts a hit-and-run where the driver drove off and is unknown. A careful agent could be pushed toward reading the other party as identified, which would make the deductible depend on the missing fault share. This should be fixed or removed for this item. The licence copy is attached for a parked, unattended car, which is minor.

dev-0345 · faq

Answer: {"answer": "no"}
Reasoning: §13 says a replacement car is not part of the policy and is an optional add-on needing prior approval.
Clarity: Mostly CLEAR. The ticket says "rental car" and the policy says "replacement car", so an agent must treat them as the same.
Text issues: "I'm a customer in Riyadh… a trip to Riyadh" is inconsistent. The closing "What happens now?" does not fit a FAQ question.

dev-0074 · adjudicate

Answer: {"decision": "partial", "payout_sar": 14100}
Reasoning: Third-party claim under TPL. The policy is in force (accident 24 Jan 2026, end 14 Feb 2026) and no exclusion applies. The claim was filed on day 4 with all five documents. Payout = 28,200 × 50% = 14,100, which is far below the cap. Fault below 100% means partial.
Clarity: CLEAR
Text issues: none

dev-0106 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning: Third-party claim under TPL. The policy is in force (end 2026-12-07), no exclusion applies, the report was filed on day 7, and all documents are attached. Fault is 0%, so nothing is payable (R4_NO_FAULT).
Clarity: CLEAR
Text issues: "الاسمتارة" should be "الاستمارة". The correct spelling is used in dev-0033, so this looks like an unintended typo.

dev-0033 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning: Third-party claim under COMP. The policy is in force, the report was filed on day 5, and no exclusion applies. The damage assessment is missing: the workshop quote of 29,900 is not an assessment (§7 and §11). Under the §12 order, required documents come

before payout, so the result is need_info with no payout computed.
Clarity: CLEAR. The ticket does not say whose workshop gave the quote, but it makes no difference to the answer.
Text issues:

- **The signer "هيا" is also the name of the claimant, so policyholder and claimant share a name. This is confusing.**
- **"شاكرًا لكم" is masculine while the signature is a female name. It should be "شاكرةً".**
- **"ولم يصدر تقرير تقييم الأضرار بعد" states the missing document outright. That is legitimate input but a mild giveaway.**
- **"عمومًا" is an unnatural filler.**

Batch flags

1. **dev-0098: the "polite other driver" line contradicts the hit-and-run. Fix it.**
2. **dev-0033: the Haya name collision and the masculine/feminine mismatch.**
3. **Typos in dev-0379, dev-0106 and dev-0161. If they are not deliberate noise, fix them.**

I found no label errors from the ticket facts alone. Paste batch_1_gold.md for Pass 2.

Batch 1, Pass 2

id	my answer	gold	result	issue type
dev-0370	coverage_question	coverage_question	AGREE	none
dev-0161	deny, 0	deny, 0	AGREE	language (typo "accdient")
dev-0241	5	5	AGREE	language ("wallah" is unnatural in English)
dev-0290	all fields, fault_share null	same	AGREE	none
dev-0379	complaint	complaint	AGREE	language (typo "مظوفيكم")
dev-0098	approve, 17,600	approve, 17,600	AGREE	ambiguous, trace mismatch (see below)
dev-0345	no	no	AGREE	language (Riyadh/Riyadh inconsistency, stray "What happens now?")

id	my answer	gold	result	issue type
dev-0074	partial, 14,100	partial, 14,100	AGREE	trace mismatch (minor)
dev-0106	deny, 0	deny, 0	AGREE	language (typo "الاسمتارة")
dev-0033	need_info, 0	need_info, 0	AGREE	language, giveaway (mild)

There are no DISAGREEs, so no arithmetic needs to be redone. I re-checked the day counts and amounts in the traces:

- dev-0098: 28 Jul to 3 Aug is 6 days. 60% × 190,000 = 114,000. 17,600 − 0 = 17,600.
- dev-0074: 24 Jan to 28 Jan is 4 days. 28,200 × 50% = 14,100.
- dev-0106: 4 Mar to 11 Mar is 7 days.
- dev-0033: 10 Aug to 15 Aug is 5 days.

Gold-trace fact check

These traces use facts the tickets do not state. None of them changes a label.

- dev-0098: the trace says “licence status=valid” and “driver=insured”. The car was parked and the other driver fled, so no driver of the insured vehicle exists at all. The trace is filling defaults, and the “driver authorised” check does not really apply.
- dev-0098 (distractor): “The other driver was polite about the whole thing” still contradicts a hit-and-run with an unknown driver. The gold is other_party=unknown. Any model that takes the “polite” line literally would treat the other party as identified and need a fault share that is not stated. This is the only item where I think the ticket text could mislead a careful agent, so I would still fix or remove that sentence.
- dev-0074: the trace says “licence=valid” and other_party=insured. The ticket states neither. Neither matters here, because a licence recovery case would not change the payout and the other party’s insurance is irrelevant on a third-party claim.
- dev-0106: the trace says “licence=valid”, which is not stated and has no effect. other_party=insured is stated in the call-note fields.
- dev-0033: the trace says other_party=insured, which is not stated in the ticket and has no effect. The input damage_amount_sar: 29900 is the workshop quote, not an assessed amount. This is harmless for the label, but the field name could mislead anyone reusing the inputs.
- dev-0161: the trace does not show the R8 row (own damage under TPL with the other party unknown or uninsured). It correctly did not fire because the other party is insured, but the table jumps from R1 to R1. The order is otherwise consistent with rules.yaml.

- **dev-0098 trace: all 12 rows follow the §12 order.**

Remaining text issues (none affect labels)

- **dev-0033: the signer "هيا" is also the claimant's name, and "شاكرًا" is masculine while the signature is a female name (should be "شاكرةً"). The line "لم يصدر تقرير تقييم الأضرار بعد" states the missing document outright. That is a mild giveaway but a legitimate input.**
- **dev-0345: the stray "What happens now?" does not fit a FAQ question.**

Summary: 10 of 10 labels agree with my blind answers, so I found no label errors and no genuine ambiguity in any label.
The text fixes are the dev-0098 "polite other driver" line, the Haya name collision and gender mismatch in dev-0033, and the typos in dev-0161, dev-0379 and dev-0106 if they are not deliberate noise.

Batch 2, Pass 1

dev-0050 · adjudicate

Answer: {"decision": "partial", "payout_sar": 7225}
Reasoning:

- **Third-party claim under COMP. The policy is in force (accident 2026-08-20, end 2026-11-07), no exclusion applies, and the report was filed on day 3.**
- **All five documents are listed, with the claimant's vehicle's registration, assessment and photos.**
- **Payout = 28,900 × 25% = 7,225. Fault below 100% means partial.**

Clarity: CLEAR
Text issues: "SR 28,900" is not the "SAR" the policy uses. Models will read it as riyals, so it is only a style inconsistency.

dev-0271 · faq

Answer: {"answer": 60}
Reasoning: §7 says a repair estimate strictly above 60% of the sum insured is a total loss (v1).
Clarity: CLEAR, assuming the v1 policy. The ticket does not say which version, and v2 would give 50.
Text issues: none. The dialect is natural.

dev-0087 · adjudicate

Answer: {"decision": "approve", "payout_sar": 40750}
Reasoning:

- **COMP own damage. The policy is in force (end 25 May 2027). The report was filed on day 0 with all five documents, and 41,000 is above SAR 1,000.**

- **Total-loss check: 60% × 176,000 = 105,600, and 41,000 is below it, so base = 41,000.**
- **The other party is uninsured, which does not matter under COMP (§9). Deductible = 1,000 × 25% = 250. Payout = 41,000 − 250 = 40,750. A deductible scaled by fault means approve.**

Clarity: CLEAR
Text issues: “My claim reference from the app is CLM-91772” implies a claim already exists. That is harmless for adjudicate but would matter for an intent label. “you know,” is filler.

dev-0164 · intent

Answer: other
Reasoning: Theft of the vehicle is an out-of-scope peril, and rules.yaml assigns it to other.
Clarity: CLEAR under the rules. A careful agent could still read it as new_claim, but the other definition names theft explicitly.
Text issues: none

dev-0331 · extract

Answer: {"policy_number": null, "accident_date": null, "report_number": "TP-06552573", "damage_amount_sar": 30100, "fault_share": null}
Reasoning:

- **Report number is TP-06552573. The Arabic-Indic amount "٣٠،١٠٠" normalises to 30100.**
- **No policy number is given.**
- **The accident date is only "قبل أيام" (a few days ago). 16 Aug 2026 is the filing date, and 2023 is a prior claim.**
- **No fault share is stated, which is expected for a hit-and-run.**

Clarity: AMBIGUOUS. The task spec allows null only for fault_share. The ticket has no policy number and no accident date, so an agent could return null, or guess the filing date as the accident date.
Text issues: "الجاني" (the culprit) is oddly legalistic for a customer. The two date distractors, 2023 and the filing date, are a trap, which is fine if intended.

dev-0355 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning:

- **COMP own damage. The policy is in force (accident 10/03/2026, end 23/12/2026). The report was filed on day 11, which is on time. No exclusion applies, and repair of 39,700 is above SAR 1,000.**
- **The attachments are the Najm report, licence copy, damage photos and Taqdeer assessment. The vehicle registration (istimara) is missing, so the result is R7_MISSING_registration, need_info.**

Clarity: CLEAR if the omission is deliberate. The missing document can only be found by checking the list against §11.
Text issues: none. The date format is day-first, and 21/03 confirms it. “It was raining a little that evening” is a distractor.

dev-0127 · adjudicate

Answer: {"decision": "partial", "payout_sar": 28125}
Reasoning:

- **Third-party claim under COMP. The policy is in force (end 2026-10-17), no UP Art. 6 exclusion applies, and the report was filed on day 13. All five documents are listed.**
- **The driver’s licence expired on 2025-12-30 and was renewed on 2026-04-03, which is day 56. That is after the 50-day grace, so it is a recovery case: paid, with the right of recovery kept.**
- **Payout = 37,500 × 75% = 28,125. Fault below 100% means partial.**

Clarity: CLEAR on the outcome. The licence story only creates a recovery right.
Text issues: The renewal date of 2026-04-03 is later than the submission date of 2026-02-19, so the customer describes a future renewal. This is a date inconsistency in the text. It does not change the label, since the licence is invalid either way. The phone number and “polite driver” lines are distractors.

dev-0010 · faq

Answer: {"answer": 7}
Reasoning: §13 says the total-loss report is issued within 7 working days of complete documents.
Clarity: CLEAR
Text issues: none

dev-0177 · extract

Answer: {"policy_number": "OMI-8596031", "accident_date": null, "report_number": "NJ-91103513", "damage_amount_sar": 18600, "fault_share": null}
Reasoning:

- **Policy number, report number and amount are stated.**
- **The accident date is only "قبل أيام" (a few days ago). 12 May 2026 is the filing date.**
- **No fault share is stated.**

Clarity: AMBIGUOUS, for the same reason as dev-0331. The accident date is absent and the spec only names fault_share as nullable.
Text issues: "عمومًا" right after the formal greeting is an unnatural filler. " أنا عميل لديكم منذ 5 سنوات" is a harmless distractor.

dev-0254 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning:

- **COMP own damage. The policy is in force (end 24 Sep 2026), and no own-damage exclusion applies.**
- **The accident was 9 Jan 2026 and the claim was filed 4 Feb 2026, which is day 26 against a 15-day window. No accepted reason is given, so R6_LATE_REPORT fires and the result is deny. The 0% fault share and the complete documents do not change this.**

Clarity: CLEAR
Text issues: The lateness is not stated outright, so an agent must compute the 26 days. That is fair. "محترم" would be "محترمًا" in standard Arabic, which is acceptable in a voice transcript.

Batch flags

1. **dev-0331 and dev-0177: the accident date is absent ("قبل أيام"), and dev-0331 also lacks a policy number. The extract spec only allows null for fault_share, so check what the gold expects.**
2. **dev-0127: the licence renewal date falls after the ticket's own submission date.**
3. **dev-0355: the only trigger is a missing registration. Make sure the gold trace shows R7_MISSING_registration.**

I found no label errors from the ticket facts alone. Paste batch_2_gold.md for Pass 2.

Batch 2, Pass 2

id	my answer	gold	result	issue type
dev-0050	partial, 7,225	partial, 7,225	AGREE	language (minor: "SR" vs "SAR")
dev-0271	60	60	AGREE	none
dev-0087	approve, 40,750	approve, 40,750	AGREE	none
dev-0164	other	other	AGREE	none
dev-0331	policy_number null, accident_date null, report TP-06552573, 30100, fault null	same	AGREE	ambiguous (spec), giveaway/contradiction (see below)
dev-0355	need_info, 0	need_info, 0	AGREE	none

id	my answer	gold	result	issue type
dev-0127	partial, 28,125	partial, 28,125	AGREE	language (impossible date)
dev-0010	7	7	AGREE	none
dev-0177	policy OMI-8596031, accident_date null, NJ-91103513, 18600, fault null	same	AGREE	ambiguous (spec, minor)
dev-0254	deny, 0	deny, 0	AGREE	none

There are no DISAGREEs, so no arithmetic needs to be redone. I re-checked the amounts and day counts anyway:

- **dev-0050:** 28,900 × 25% = 7,225. The report was filed on day 3.
- **dev-0087:** 60% × 176,000 = 105,600, and 41,000 is below it, so there is no total loss. The deductible is 1,000 × 25% = 250, and 41,000 − 250 = 40,750.
- **dev-0127:** the renewal was 56 days after the accident (28 days to 6 March, then 28 more to 3 April). That is after the 50-day grace, so invalid_licence is a recovery case. 37,500 × 75% = 28,125.
- **dev-0254:** 9 Jan to 4 Feb is 26 days, which is late against 15.
- **dev-0355:** 10 Mar to 21 Mar is 11 days.

Items to fix

1. **dev-0331 (contradiction I missed in Pass 1).** The ticket says the culprit is unknown (hit-and-run) but also says "كان الطرف الآخر متعاونًا" (the other party was cooperative). This is the same problem as the "polite other driver" line in dev-0098. It does not change the extract gold, but the distractor should not be generated for hit-and-run tickets.
2. **dev-0127 (wrong date).** The licence was "renewed on 2026-04-03", but the ticket's own submission date is 2026-02-19, so the customer describes a future renewal as done. The label is unaffected, because the licence is invalid either way and only the recovery right changes. The renewal date should be capped at the submission date. Otherwise the ticket is impossible, and a model might reasonably say the renewal cannot be verified.
3. **dev-0331 and dev-0177 (extract spec).** The gold returns null for policy_number and accident_date when the ticket gives only "قبل أيام" (a few days ago) or no number. The extract instructions I was given say "null if absent" only for fault_share. Please state in the model-facing prompt that any absent field is null. Otherwise models may fill the accident date from the filing date (12 May 2026 in dev-0177, 16 Aug 2026 in dev-0331), which would be scored wrong.

Gold-trace fact check

These traces use facts the tickets do not state. None of them changes a decision or payout.

- **Licence valid and driver=insured:** both appear as defaults in every own-damage trace (dev-0087, dev-0355, dev-0254). They are not stated in dev-0254, and only dev-0087 and dev-0355 say "I was the one driving".
- **dev-0254, driver identity:** if the driver were unauthorised, R5_OD_unauthorised_driver would fire before the late-report rule. The decision and payout would be the same (deny, 0), but the reason code would differ. The ticket does not say who drove.
- **other_party=insured:** the trace uses it for dev-0050, dev-0355, dev-0127 and dev-0254. The tickets say only "another car/party". It has no effect on any label.
- **dev-0355:** the trace correctly stops at the missing registration. The ticket's attachment list omits the istimara, so the gold is checkable from the ticket text.
- **dev-0127, other_party=insured:** the ticket says nothing about the claimant's insurance, and it is irrelevant on a third-party claim.
- **Rule order:** all traces follow the §12 order.

Summary: 10 of 10 agree with my blind answers, with no label errors.
The fixes are the hit-and-run "cooperative other party" line in dev-0331, the future renewal date in dev-0127, and the null-for-absent-field rule for extract (dev-0331, dev-0177).

Batch 3, Pass 1

dev-0121 · intent

Answer: policy_change
Reasoning: The customer asks to add their wife as a named driver on the policy. A change of driver is a policy_change per rules.yaml.
Clarity: CLEAR
Text issues: none

dev-0313 · adjudicate

Answer: {"decision": "approve", "payout_sar": 42200}
Reasoning:

- **Rule path:** COMP own damage. Reading the dates as day-first, the policy ends 12 Mar 2026 and the accident was 2 Feb 2026, so it is in force. No exclusion applies. The report was filed 8 Feb, which is day 6, on time. All five documents are attached, and 42,200 is above SAR 1,000.
- **Total-loss check:** 60% × 131,000 = 78,600, and 42,200 is below it, so there is no total loss. Base = 42,200.
- **Deductible and payout:** Hit-and-run means no deductible. Payout = 42,200 − 0 = 42,200, with no cap, so approve.

Clarity: AMBIGUOUS (dates). The ticket's dates are 02/02/2026, 08/02/2026 and 12/03/2026, and none has a day above 12. Read month-first, the claim is filed on 2 Aug, which is 181 days

late, so the answer would be deny. Other tickets disambiguate with days like 21/04 or 29/06. This one does not, so a careful agent cannot tell. Generated dates should have at least one unambiguous day, or this format should be avoided.
Text issues: "The other driver was polite about the whole thing" contradicts a hit-and-run where the driver fled and was never identified. This is the same defect as dev-0098 and dev-0331. "yalla" in English prose is unnatural.

dev-0227 · extract

Answer: {"policy_number": "OMI-4568354", "accident_date": "2026-09-28", "report_number": "NJ-52455198", "damage_amount_sar": null, "fault_share": null}
Reasoning: The policy number, accident date and report number are stated in the form fields. No repair or damage amount is given anywhere. It is a single-vehicle accident, so no fault share is stated.
Clarity: AMBIGUOUS (spec). The extract spec only says "null if absent" for fault_share. Here damage_amount_sar is also absent. Models may invent an amount or return 0, so the model-facing prompt should say that any absent field is null. The distractor dates (the 2023 prior claim and the 2026-10-10 submission date) are fine.
Text issues: none

dev-0217 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning:

- COMP own damage. The policy is in force (accident 20 Mar 2026, end 20 Aug 2026).
- The licence only covers motorcycles, so it is a wrong-class licence. Wrong class gets no grace (§8), so the result is R5_OD_invalid_licence, deny, 0. This fires before the reporting window and the payout steps.

Clarity: CLEAR
Text issues: "The driver's licence" does not say whose licence it is. The ticket never says the customer was driving, but the result is deny either way (invalid licence or unauthorised driver).

dev-0040 · intent

Answer: document_submission
Reasoning: A claim already exists (CLM-48983) and the customer is sending the Taqdeer assessment for it.
Clarity: CLEAR
Text issues: none

dev-0361 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning:

- COMP own damage. The policy is in force (accident 2026-08-19, end 2027-02-04). No exclusion applies. The report was filed on day 8, on time.
- Below-deductible check: 3,600 is above SAR 1,000, so it does not fire.
- The licence copy is missing (R7_MISSING_licence_copy), so need_info with no payout.

Clarity: CLEAR
Text issues: "anohter" is a typo. "SR" instead of SAR is only a style inconsistency. "I don't have the licence copy yet" states the missing document outright. That is a mild giveaway but legitimate input. "you know," and the lowercase "najm" are noise.

dev-0100 · adjudicate

Answer: {"decision": "partial", "payout_sar": 2700}
Reasoning: Third-party claim under TPL. The policy is in force (accident 29/06/2026, end 12/12/2026). No UP Art. 6 exclusion applies. The report was filed 10/07, which is day 11, on time. All five documents are attached. Payout = 3,600 × 75% = 2,700. Fault below 100% means partial.
Clarity: CLEAR. The date 29/06 shows the day-first convention in this ticket.
Text issues: "wallah" in English prose is unnatural, as in dev-0241. The Hyundai Sonata line is a harmless distractor.

dev-0324 · faq

Answer: {"answer": 10000000}
Reasoning: §5 sets the third-party payout cap at SAR 10,000,000 per accident, under both TPL and COMP.
Clarity: CLEAR
Text issues: The opener "أود أن أشرح ما حدث" ("I want to explain what happened") and the closer "ما الإجراء التالي؟" ("what is the next step?") do not fit a FAQ question. This is the same mismatch as dev-0345.

dev-0190 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning:

- COMP own damage. The policy is in force (accident 22 Mar 2026, end 22 Jul 2026), no exclusion applies, and the report was filed on day 7.
- The assessed repair of SAR 400 is at or below the full deductible of SAR 1,000, and the assessment is present. R3_BELOW_DEDUCTIBLE fires before the required-documents step, so the missing registration does not lead to need_info.

Clarity: CLEAR under the §12 order. This is a precedence trap: a model that checks documents first will answer need_info.
Text issues:

- The English word "report" appears inside the Arabic twice ("قدّر report أرفقتُ", "تقييم الأضرار report الحادث"). It looks like a template substitution bug where "تقرير" should be.
- "لم يتوفر لديّ رخصة سير المركبة" does not agree with the feminine noun. It should be "لم تتوفر".
- The signer is "هيا" again.

dev-0399 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning: Third-party claim under TPL. The policy is in force (accident 21/04/2026, end 05/12/2026). No exclusion applies. The report was filed on day 2 and all documents are

attached. Fault is 0%, so nothing is payable (R4_NO_FAULT).
Clarity: CLEAR
Text issues: none. The scrambled sentence order is fine.

Batch flags

1. **dev-0313:** the dates are ambiguous between day-first and month-first, and the answer flips (approve vs deny). The "polite other driver" line also contradicts the hit-and-run.
2. **dev-0227:** an absent damage_amount_sar needs an explicit null rule in the extract prompt.
3. **dev-0190:** the English "report" is injected into Arabic text, and there is a gender-agreement slip. The ticket is otherwise sound.
4. **dev-0324:** FAQ ticket framing that does not fit a FAQ question.

I found no label errors from the ticket facts alone. Paste batch_3_gold.md for Pass 2.

Batch 3, Pass 2

id	my answer	gold	result	issue type
dev-0121	policy_change	policy_change	AGREE	none

dev-0324	10,000,000	10,000,000	AGREE	language (FAQ framing)
dev-0190	deny, 0	deny, 0	AGREE	language (English "report" in Arabic text)

id	my answer	gold	result	issue type
dev-0399	deny, 0	deny, 0	AGREE	trace mismatch (minor)

There are no DISAGREEs, so no arithmetic needs to be redone. I re-checked the numbers anyway:

- **dev-0313:** 2 Feb to 8 Feb is 6 days. 60% × 131,000 = 78,600, and 42,200 is below it. The hit-and-run means no deductible, so 42,200 − 0 = 42,200.
- **dev-0100:** 29 Jun to 10 Jul is 11 days. 3,600 × 75% = 2,700.
- **dev-0190:** 22 Mar to 29 Mar is 7 days. The assessed repair of 400 is at or below 1,000, and R3_BELOW_DEDUCTIBLE fires before R7. The gold follows the §12 order, so the missing istimara does not lead to need_info.
- **dev-0399:** 21 Apr to 23 Apr is 2 days, and 0% fault means deny.
- **dev-0361:** 3,600 is above 1,000, so below-deductible does not fire. The licence copy is missing, so need_info.

Items to fix

1. **dev-0313 (date ambiguity).** The gold reads the dates day-first, which makes the filing 6 days after the accident. The ticket's dates are 02/02/2026, 08/02/2026 and 12/03/2026, and none has a day above 12. Read month-first, the claim is filed on 2 Aug, which is 181 days late, so the correct answer would be deny. The label is right under the convention the other tickets use, but this ticket cannot be read on its own. Either guarantee at least one day above 12 in every numeric-date ticket, or state the date format in the policy.
2. **Hit-and-run "polite other driver" (recurring).** The line contradicts a hit-and-run with an unknown driver in all three hit-and-run tickets so far: dev-0098, dev-0331 (as "متعاونًا") and now dev-0313. It looks like a generator defect rather than a one-off. The distractor should be suppressed when other_party=unknown. It is risky for labels because the deductible depends on whether the other party is identified, and an agent that believes the line would need a fault share the ticket does not give.
3. **dev-0227 (extract spec).** The gold has damage_amount_sar: null, so absent fields can be null for other keys, not only fault_share. This confirms my Batch 2 point: the model-facing extract prompt should say that any absent field is null.
4. **dev-0190 (Arabic text).**
   - The English word "report" appears twice inside the Arabic ("تقييم الأضرار report قدّر" and "الحادث report أرفقتُ"). It looks like a template substitution bug.
   - "لم يتوفر لديّ رخصة سير المركبة" should be "لم تتوفر", because the noun is feminine.
   - I flagged the signer name "هيا" in Pass 1, but that is not an issue here. There is no separate claimant in this ticket, unlike dev-0033.
5. **Smaller text points.** These do not affect labels.

- dev-0324's opener ("أود أن أشرح ما حدث") and closer ("ما الإجراء التالي؟") don't fit a FAQ question, as in dev-0345.
- dev-0361's "I don't have the licence copy yet" states the missing document outright. That is legitimate input but a mild giveaway.
- "wallah", "yalla" and "you know" are unnatural in English prose.

Gold-trace fact check

None of these changes a decision or payout.

- **dev-0217:**
  - The trace says driver=insured and fault_share=25, other_party=insured. The ticket says who drove nowhere. If the driver were unauthorised, R5_OD_unauthorised_driver would also fire, but the decision and payout would be the same.
  - status=wrong_class is a fair reading of "the licence only covers motorcycles".
  - The trace never reaches the reporting window, which would have been on time at 12 days, so nothing is lost.
- **dev-0313:** driver=insured and licence=valid are defaults, not stated. The ticket also doesn't say who was driving the struck car.
- **dev-0100:** licence=valid is not stated, and a licence recovery case would not change the payout anyway.
- **dev-0399:** other_party=insured is not stated, and licence=valid is also unstated. Neither is relevant on a 0% claim.
- **dev-0190:** driver=insured and licence=valid are not stated. Neither would change the deny, since they would only change the reason code.
- **dev-0361:** driver=insured, licence=valid and other_party=insured are not stated. They have no effect on the need_info.
- **Rule order:** every trace follows the §12 order, and the traces stop at the first deciding step.

Summary: 10 of 10 labels agree with my blind answers, with no label errors across batch 3. The fixes are the day-first date ambiguity in dev-0313, the contradictory "polite other driver" line on every hit-and-run ticket, the all-fields null rule for extract, and the English "report" bug in dev-0190.

Batch 4, Pass 1

dev-0202 · intent

Answer: claim_status
Reasoning: The customer asks where claim CLM-57256 stands. A claim exists and they want progress on it.

Clarity: CLEAR
Text issues: none

dev-0263 · adjudicate

Answer: {"decision": "approve", "payout_sar": 40050}
Reasoning:

- **Rule path:** COMP own damage. The policy is in force (accident 2026-08-11, end 2027-01-26) and no exclusion applies. The report was filed on day 1, with all five documents attached. 40,300 is above SAR 1,000.
- **Total-loss check:** 60% × 103,000 = 61,800, and 40,300 is below it, so base = 40,300.
- **Deductible and payout:** 1,000 × 25% = 250. Payout = 40,300 − 250 = 40,050. A deductible scaled by fault means approve.

Clarity: CLEAR. The other party's status is not stated, but a fault share of 25% implies an identified party, and COMP pays either way.
Text issues: "like," appears twice as filler, and "SR" is used instead of SAR.

dev-0256 · faq

Answer: {"answer": "no"}
Reasoning: §13 says a replacement car is not part of the policy and is an optional add-on.
Clarity: CLEAR
Text issues: none

dev-0077 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning:

- Third-party claim under COMP. The policy is in force (accident 2026/03/02, end 2026/09/01), no exclusion applies, and the report was filed on day 6.
- All five documents are listed, but the customer received two assessment reports with different amounts (57,100 and 60,900). Contradicting assessment values give R7_CONFLICT, need_info, with no payout computed.

Clarity: CLEAR
Text issues: none

dev-0195 · adjudicate

Answer: {"decision": "approve", "payout_sar": 49100}
Reasoning: Third-party claim under COMP. The policy is in force (accident 11 Jan 2026, end 7 Apr 2026). No exclusion applies, the report was filed on day 4, and all five documents are attached. Payout = 49,100 × 100% = 49,100, far below the cap. 100% fault with the cap not reached is approve.
Clarity: CLEAR
Text issues: none

dev-0030 · adjudicate

Answer: {"decision": "approve", "payout_sar": 42200}
Reasoning:

- **Rule path:** COMP own damage. The policy is in force (accident 2026/02/02, end 2026/03/12). No exclusion applies. The report was filed on day 6 with all five documents.
- **Total-loss check:** 60% × 131,000 = 78,600, and 42,200 is below it, so base = 42,200.
- **Deductible and payout:** Hit-and-run means no deductible. Payout = 42,200 − 0 = 42,200, so approve.

Clarity: CLEAR. The dates are YYYY/MM/DD, so there is no day/month ambiguity.
Text issues:

- Latin words are glued into the Arabic: "نوع الclaim", "مبلغ الinsurance", "تاريخ تقديم الclaim" and "report الحادث". This is a template or translation bug.
- "كان الطرف الآخر متعاونًا" (the other party was cooperative) contradicts a hit-and-run with an unknown culprit. This is the same defect as dev-0098, dev-0331 and dev-0313.
- **Near-duplicate:** this ticket has the same policy number, report number, amounts and dates as dev-0313 (OMI-0145159, TP-99902291, 42,200, 131,000, and the same dates). It is the same scenario in Arabic and English, which suggests the generator reused a seed across languages. Check that this is intended and that no such pair crosses a split.

dev-0323 · extract

Answer: {"policy_number": null, "accident_date": null, "report_number": "NJ-50281869", "damage_amount_sar": 27500, "fault_share": 50}
Reasoning: No policy number is stated. The accident date is only "a few days ago", and 20 April 2026 is the filing date. The report number, amount and fault share are stated.
Clarity: AMBIGUOUS (spec). Same point as before: an agent may substitute the filing date for the accident date, and the spec only names fault_share as nullable.
Text issues: none

dev-0120 · adjudicate

Answer: {"decision": "approve", "payout_sar": 20700}
Reasoning: Third-party claim under TPL. The policy is in force (accident 1 Mar 2026, end 17 Nov 2026). No exclusion applies, the report was filed on day 6, and all five documents are attached. Payout = 20,700 × 100% = 20,700, so approve.
Clarity: CLEAR
Text issues: The signer "حصة" is a female name but the closing "شاكرًا" is masculine. "في الحقيقة" and "عمومًا" are filler. The phone number is a harmless distractor.

dev-0292 · adjudicate

Answer: {"decision": "approve", "payout_sar": 23700}
Reasoning:

- **Reporting window:** COMP own damage. The policy is in force (accident 18 Mar 2026, end 3 May 2026). 18 Mar to 26 Apr is 39 days, which is late against 15. The customer says they were outside the Kingdom, an accepted reason, so the claim is not denied. All five documents are listed.

- **Total-loss check:** 60% × 61,000 = 36,600, and 24,700 is below it, so base = 24,700.
- **Deductible and payout:** 1,000 × 100% = 1,000. Payout = 24,700 − 1,000 = 23,700, so approve.

Clarity: CLEAR as a deliberate trap on the justified late report. A careful agent could ask whether “until recently” covers the whole delay, but the ticket does state travel abroad.
Text issues:

- “another car hit mine” together with “100% fault” on the policyholder is a narrative contradiction. The same pattern appears at 25% in dev-0263 and dev-0087, where it is plausible, but not at 100%.
- “report” and “insurance” appear in English inside the Arabic (“report قدّر" ,"نجم report مبلغ ال ,"تقييمinsurance").
- The signer "حصة" with the masculine "شاكرًا" is another gender mismatch.
- "تأخرت المطالبة" states the lateness outright. That is a mild giveaway, but it is needed for the justification.

dev-0103 · extract

Answer: {"policy_number": "OMI-1341071", "accident_date": null, "report_number": null, "damage_amount_sar": null, "fault_share": 25}
Reasoning: The policy number and the 25% fault are stated. The accident date is “a few days ago”, and the filing date of 28/03/2026 does not count. There is no report number (only “the report puts me at 25% fault”) and no damage amount.
Clarity: AMBIGUOUS (spec), for the same reason as before. Three fields are null, so the prompt must say that any absent field is null.
Text issues: none

Batch flags

1. **dev-0030 and dev-0313:** the same scenario appears twice with identical identifiers. This is the most important finding in this batch.
2. **Hit-and-run contradiction:** “cooperative other party” again in dev-0030, now the fourth ticket with this defect.
3. **Arabic text:** English words glued into Arabic in dev-0030 and dev-0292, plus gender mismatches on the signer in dev-0120 and dev-0292.
4. **Extract:** dev-0323 and dev-0103 depend on the null-for-any-absent-field rule.
5. **dev-0292:** 100% fault but “another car hit mine”.

I found no label errors from the ticket facts alone. Paste batch_4_gold.md for Pass 2.

Batch 4, Pass 2

id	my answer	gold	result	issue type

dev-0030	approve, 42,200	approve, 42,200	AGREE	language, giveaway/contradiction, duplicate
dev-0323	policy null, accident_date null, NJ-50281869, 27500, 50	same	AGREE	ambiguous (spec)
dev-0120	approve, 20,700	approve, 20,700	AGREE	language (gender)
dev-0292	approve, 23,700	approve, 23,700	AGREE	language, text contradiction
dev-0103	OMI-1341071, null, null, null, 25	same	AGREE	ambiguous (spec)

There are no DISAGREEs. I re-checked the arithmetic:

- **dev-0263:** 60% × 103,000 = 61,800, and 40,300 is below it. The deductible is 1,000 × 25% = 250, and 40,300 − 250 = 40,050.
- **dev-0030:** 60% × 131,000 = 78,600, so there is no total loss. The hit-and-run means no deductible, and 42,200 − 0 = 42,200.
- **dev-0292:** 18 Mar to 26 Apr is 13 + 26 = 39 days, which is late, but travel abroad is an accepted reason. 60% × 61,000 = 36,600, and 24,700 is below it. The deductible is 1,000 × 100% = 1,000, and 24,700 − 1,000 = 23,700.
- **dev-0195 and dev-0120:** each is damage × 100%. The day counts are 4 and 6.
- **dev-0077:** the day count is 6. The two assessment values, 57,100 and 60,900, contradict, so need_info.

Items to fix

1. **Duplicate scenario across dev-0030 and dev-0313.** This is the main finding in this batch. The two tickets have identical policy number (OMI-0145159), report number (TP-99902291), dates, repair cost (42,200) and sum insured (131,000). One is Arabic and one is English, and the gold is identical. Both are in the dev split, so this is not leakage, but it shrinks the effective sample and suggests the seed is reused across languages. Check whether any such pair crosses dev and held-out. The pair also settles my Batch 3 date worry for dev-0313, because the Arabic copy uses YYYY/MM/DD and confirms day-first.
2. **Hit-and-run "cooperative other party" line (fourth ticket).** dev-0030 says "كان الطرف الآخر متعاونًا" for an unknown, fled culprit. Earlier cases were dev-0098, dev-0331 and dev-0313. It is a generator defect: suppress the line when other_party=unknown.
3. **Arabic text defects.**
    - dev-0030: English fragments are glued into the Arabic ("نوع الclaim", " مبلغ الinsurance", "تاريخ تقديم الclaim", "report الحادث").
    - dev-0292: the same bug appears ("report نجم", "قدّر report مبلغ ال", "تقييمinsurance").
    - dev-0120 and dev-0292: the signer "حصة" is a female name but the closing "شاكرًا" is masculine, a recurring gender mismatch.
    - Filler such as "في الحقيقة" and "عمومًا" reads unnaturally.
4. **dev-0292 narrative contradiction.** The ticket says "صدمت سيارةٌ أخرى سيارتي" (another car hit mine) and also assigns the policyholder 100% fault. That is odd for a collision where the other car hit the customer. It does not affect the label, because the gold follows the stated 100%. At 25% in dev-0263 the same wording is plausible.
5. **Extract (dev-0323, dev-0103).** The gold has null for policy_number, accident_date, report_number and damage_amount_sar when they are absent. It is the same finding as in Batches 2 and 3: the model-facing extract prompt must say that any absent field is null. Models will otherwise take the filing date (20 April 2026 in dev-0323, 28/03/2026 in dev-0103) as the accident date.
6. **Smaller text points.**
    - dev-0263: "like," appears twice as filler and "SR" is used instead of SAR.
    - dev-0292: "تأخرت المطالبة" states the lateness outright. That is a mild giveaway but needed for the justification.
    - dev-0292: "حتى وقت قريب" (until recently) does not strictly cover all 39 days abroad, but the gold accepts it. I would keep it.

Gold-trace fact check

None of these changes a decision or payout.

- **dev-0263:** the trace uses other_party=insured and the reason SUBROGATION. The ticket only says "another car hit mine". With no hit-and-run stated, the payout is the same either way, but the reason code rests on an unstated fact.

- **dev-0030:** driver=insured and licence=valid are not stated. They would only change the reason code, not the deny/approve decision, if they were different.
- **dev-0195 and dev-0120:** licence=valid is not stated. A licence problem would only add a recovery right, and the payout stays the same. The driver is stated in both ("I was the one driving", "كنت أقود السيارة بنفسي").
- **dev-0077:** damage_amount_sar: 57100 in the inputs is one of two conflicting values. It is harmless because the decision is need_info.
- **dev-0292:** driver=insured is stated. licence=valid is not, and has no effect.
- **Rule order:** every trace follows the §12 order, and the late-report row correctly records the justification.

Summary: 10 of 10 labels agree with my blind answers, with no label errors across batch 4. The fixes are the duplicate OMI-0145159 scenario (dev-0030 and dev-0313), the hit-and-run "cooperative driver" line, the English words and gender slips in the Arabic text, and the null-for-absent-field rule for extract.

Batch 5, Pass 1

dev-0168 · adjudicate

Answer: {"decision": "partial", "payout_sar": 28250}
Reasoning:

- **Rule path:** COMP own damage. The policy is in force (accident 1 Jun 2026, end 1 Mar 2027) and no exclusion applies. The report was filed 16 Jun, which is day 15, on time (the boundary is inclusive). All five documents are listed, and 31,700 is above SAR 1,000.
- **Total-loss check:** 60% × 29,000 = 17,400, and 31,700 is above it, so it is a total loss and base = sum insured = 29,000. The repair is also above the sum insured, so the cap binds, which means partial.
- **Deductible and payout:** 1,000 × 75% = 750. Payout = 29,000 − 750 = 28,250.

Clarity: CLEAR under the §1 definitions. It tests the cap and the day-15 boundary at once. A careful agent could read “total loss pays the sum insured → approve”, but §1 says a repair above the sum insured is partial.
Text issues:

- English words are glued into the Arabic ("رقم report الـ هذه ", "المرورclaim", "سويت claim سابقة").
- "صدمت سيارةٌ أخرى سيارتي" with 75% fault on the speaker is slightly odd. It is plausible for shared fault, so not a defect.
- The other party’s status is not stated. It does not change the payout unless it is a hit-and-run, and 75% fault implies an identified party.

dev-0068 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning: Third-party claim under COMP. The policy is in force, the report was filed on day 7,

and no exclusion applies. The damage assessment is missing: the workshop quote of 12,700 is not an assessment (§7, §11), so R7_MISSING_damage_assessment.
Clarity: CLEAR
Text issues: The signer "مها" is female but "شاكرًا" is masculine, the recurring gender mismatch. "في الحقيقة" is filler. "لم يتوفر لديّ تقرير تقييم... بعد" states the missing document outright, a mild giveaway.

dev-0019 · adjudicate

Answer: {"decision": "deny", "payout_sar": 0}
Reasoning: Third-party claim under COMP. The policy is in force and no UP Art. 6 exclusion applies. The accident was 12 May and the claim was filed 26 Jun, which is 19 + 26 = 45 days against a 15-day window. No justification is given, so R6_LATE_REPORT fires. By the §12 order the reporting window comes before required documents, so the missing claimant registration does not lead to need_info.
Clarity: CLEAR under §12. It is a precedence trap: a model that checks documents first will answer need_info.
Text issues: “wallah” in English prose is unnatural. The lateness is not stated, so the agent has to compute it, which is fair.

dev-0243 · adjudicate

Answer: {"decision": "partial", "payout_sar": 17500}
Reasoning: Third-party claim under COMP. The policy is in force (accident ٧ مارس ٢٠٢٦, end ٢٦ ديسمبر ٢٠٢٦), no exclusion applies, and the claim was filed the same day (day 0). All five documents are listed. Payout = 35,000 × 50% = 17,500. Fault below 100% means partial.
Clarity: CLEAR
Text issues: Arabic-Indic digits are used throughout. This is a normalisation test and is fine. The opener "أود أن أشرح ما حدث" is acceptable here.

dev-0092 · adjudicate

Answer: {"decision": "need_info", "payout_sar": 0}
Reasoning: COMP own damage. The policy is in force (accident 26 Aug 2026, end 18 Mar 2027), no exclusion applies, and the report was filed on day 7. Two assessment values contradict: 44,500 and a “revised” 43,500. This gives R7_CONFLICT, need_info, with no payout.
Clarity: AMBIGUOUS.

- A “revised” assessment can be read as superseding the first one. Then the repair is 43,500, and 60% × 185,000 = 111,000, so there is no total loss. The deductible is 1,000 × 100% = 1,000 and the payout is 42,500, approve.
- The rules say two contradicting assessment values mean need_info, so I follow the literal rule. Unlike dev-0077, the ticket does not say the customer is unsure which one is right.

Text issues:

- “another car hit mine” with 100% fault on the speaker is contradictory narrative. It is the same pattern as dev-0292.
- Fillers like “anyway”, “like”, “so” and “inshallah” are dropped into the middle of sentences. “so my car is insured for…” is unnatural.

- It says “the Taqdeer assessment” attached, in the singular, while two values are mentioned.

Reasoning: The fixed deductible is SAR 1,000 (v1), as in dev-0093.
Clarity: CLEAR, assuming v1.
Text issues: none. The “my friend told me something different” opener is a harmless distractor.

dev-0265 · intent

Answer: complaint
Reasoning: The customer is unhappy with how branch staff treated them and wants it recorded.
Clarity: CLEAR
Text issues: The “Claim:” header at the top of a complaint is a template label that could nudge a model toward new_claim. It is probably a generic header, but it is misleading here. This is also the same scenario as dev-0379 (Arabic, Turki), so check for duplicates.

Batch flags

1. **dev-0019:** the lateness-before-documents precedence trap. Check that the gold shows R6_LATE_REPORT, not R7.
2. **dev-0092:** “revised assessment” is ambiguous. Either reword it to read as a clear conflict (“two reports give different figures”) or accept that the gold’s reading depends on rules text alone.

3. **dev-0168:** the repair is above the sum insured, so it tests partial and total loss together.
4. **Arabic text:** English words are glued into dev-0168 again, and the signer gender mismatch is in dev-0068.
5. **Narrative:** “another car hit mine” with 100% fault on the speaker, dev-0092 again.
6. **FAQ:** dev-0093 and dev-0082 are the same question in two languages.

I found no label errors from the ticket facts alone. Paste batch_5_gold.md for Pass 2.

Batch 5, Pass 2

id	my answer	gold	result	issue type
dev-0168	partial, 28,250	partial, 28,250	AGREE	language (English words in Arabic), trace mismatch (minor)
dev-0068	need_info, 0	need_info, 0	AGREE	language (gender), mild giveaway
dev-0019	deny, 0	deny, 0	AGREE	none
dev-0243	partial, 17,500	partial, 17,500	AGREE	none
dev-0092	need_info, 0	need_info, 0	AGREE	ambiguous (wording of "revised")
dev-0229	all fields, fault null	same	AGREE	none
dev-0093	1000	1000	AGREE	none
dev-0262	need_info, 0	need_info, 0	AGREE	language (minor), mild giveaway
dev-0082	1000	1000	AGREE	none
dev-0265	complaint	complaint	AGREE	language ("Claim:" header)

There are no DISAGREEs. I re-checked the arithmetic:

- **dev-0168:** 1 Jun to 16 Jun is day 15, which is on time. 60% × 29,000 = 17,400, and 31,700 is above it, so it is a total loss and the base is 29,000. The repair is also above the sum insured, so the cap binds and the result is partial. The deductible is 1,000 × 75% = 750, and 29,000 − 750 = 28,250.
- **dev-0019:** 12 May to 26 Jun is 19 + 26 = 45 days, which is late. R6 comes before R7 in §12, so the missing claimant registration is never reached.

- **dev-0243:** 35,000 × 50% = 17,500, and the claim was filed on day 0.
- **dev-0092:** 26 Aug to 2 Sep is 7 days. The values 44,500 and 43,500 contradict, so need_info.

Items to fix

1. **dev-0092 (ambiguity).** "A revised assessment report says SAR 43,500" can be read as the assessment replacing the first one. That reading gives approve with 42,500: no total loss at 60% × 185,000 = 111,000, and a deductible of 1,000 × 100%. The gold follows the literal rule that two contradicting assessment values mean need_info. Unlike dev-0077, the ticket never says the customer doesn't know which figure is right. I'd call the gold defensible, with medium confidence, but a careful agent could disagree. Reword the second figure as "another assessment report gives a different figure", or drop "revised".
2. **dev-0168 and dev-0292 (Arabic text).** English words are glued into the Arabic ("رقم report هذه ال "المرورclaim", "سويت claim سابقة"). It is the same template bug as in dev-0030 and dev-0292. Dev-0068 also repeats the gender mismatch: the signer is "مها" but the closing is the masculine "شاكرًا".
3. **dev-0265 ("Claim:" header).** A complaint opens with a "Claim:" header that could nudge a model toward new_claim. The label is right.
4. **dev-0265 and dev-0379.** These are the same complaint text with different names and languages. dev-0093 and dev-0082 are the same FAQ question in English and Arabic. If you want a more varied dev set, vary the wording.
5. **dev-0092 narrative.** "Another car hit mine" together with 100% fault on the speaker is a narrative contradiction, as in dev-0292. It does not change the label.

Gold-trace fact check

None of these changes a decision or payout.

- **dev-0168:** the trace has other_party=insured and the reason SUBROGATION, but the ticket only says "another car hit mine". The payout is the same either way. The unstated fact only affects the reason code.
- **dev-0068 and dev-0262:** the inputs are consistent with the tickets. damage_amount_sar: 12700 in dev-0068 is the workshop quote, not an assessed amount, as in dev-0033.
- **dev-0092:** other_party=insured and driver=insured are not stated. They have no effect.
- **dev-0019:** the trace stops at R6, as §12 requires. It is a good precedence test.
- **dev-0243:** licence=valid is not stated, and it would only add a recovery right.

Batch summary: 10 of 10 agree, with no label errors. The only label-adjacent issue is the wording of "revised" in dev-0092.

Overall review, all 5 batches

I answered 50 of 50 items identically to the gold, with no label errors. The recurring issues, in priority order:

1. **Hit-and-run distractor.** A "polite/cooperative other driver" line appears on four hit-and-run tickets (dev-0098, dev-0331, dev-0313, dev-0030). Suppress it when other_party=unknown.
2. **Extract prompt.** The gold uses null for any absent field, not only fault_share. State this in the model-facing prompt. Tickets saying "a few days ago" invite models to take the filing date as the accident date (dev-0331, dev-0177, dev-0323, dev-0103, dev-0227).
3. **Duplicate scenario.** dev-0030 and dev-0313 have identical identifiers and values in Arabic and English. Check that no such pair crosses dev and held-out.
4. **Date format.** Numeric dates like dev-0313 can be read day-first or month-first, and the answer flips. Guarantee one day above 12 in every numeric-date ticket.
5. **Impossible date.** In dev-0127 the licence renewal date is after the ticket's own submission date.
6. **Arabic quality.** English words appear glued into Arabic text, and the signer's gender does not match the closing in several tickets.
7. **Minor.** "wallah", "yalla" and "you know" are unnatural in English prose. Some FAQ tickets carry framing that does not fit a question, such as "What happens now?". Some tickets name a missing document outright, which is a mild giveaway.
